

CAPABILITY

WWW.CAPABILITYNET.EU

Overview

- **The set up of the CAPABILITY website is part of Work Package 1 – Milestone 2 (WP1/M2)**
- **It will provide an integrated access base for commonly shared data and information**

Considerations

- **It should be an easy and clear communication tool to be consulted by CAPABILITY participants, expert advisors, observers and the evaluator**
- **It should provide information for users and EuroGentest participants**
- **It should be attractive for visitors interested in CAPABILITY issues**
- **It will be the visual identity of CAPABILITY**

Structure

- **Homepage with an introduction about the concept of CAPABILITY**
- **Includes an area for news or recent events**
- **CAPABILITY will be linked to the EuroGentest and EuroGenGuide websites**
- **CAPABILITY will have links to the participants, observers, advisors and the evaluator websites (to be agreed on)**

Structure

- E-mail address under *capabilitynet.eu* domain:

For questions about the website:

webmaster@capabilitynet.eu

For questions or comments about the content and information of the project:

info@capabilitynet.eu

- **Disclaimer for copyright and content warranty**

Menus

- **The website will display two menus:**
- **Main menu – will contain the following links:**
 - **Home**
 - **Participants**
 - **Expert Advisors**
 - **Demonstration Projects**
 - **Meetings**
 - **Documents**
- **Support menu – will contain the following links:**
 - **About us**
 - **Links**
 - **Contacts**
 - **Legal Notice**

 **Capacity Building for the Transfer of Genetic Knowledge into Practice and Prevention**

Home Participants Expert Advisors Demonstration Projects Meetings Documents

CAPABILITY

CAPABILITY is 3-year model project developed jointly by units 3 (Clinical Genetics, Community Genetics and Public Health) and 6 (Education) of the Network of Excellence: Genetic Testing in Europe Network for test development, harmonization, validation and standardization of services (EuroGentest) and by leading experts from: Argentina, Egypt and South Africa, the latter being currently engaged in major development projects to integrate genetic services in primary care and prevention in their countries.

CAPABILITY will:

- develop an analytic framework for evidence-based genetic test evaluation including the domains: efficacy (evidence of utility in controlled settings) and effectiveness (evidence of utility in real settings), identify priorities for capacity building by a systematic needs assessment survey and
- validate the project's approach by means of a demonstration project.

CAPABILITY's overall objectives are to contribute to the efforts to establish and sustain a worldwide harmonisation process for quality standards for the integration of genetic test/genomic knowledge applications into practice and prevention and to serve as a model project for successful, sustainable collaboration between EU research centres and centres from developing countries.

The following challenges are common to both EU and middle income countries:

1. The need to develop an evidence-based evaluation process for genetic tests or other applications of genomic knowledge in transition from research into practice.

News

1st CAPABILITY Workshop
Place: Trolleholm Castle, Sweden
Date: May 7-9
[Info](#)

CAPABILITY Presentation
Place: Rio de Janeiro, Brasil
Date: June 18th, 2007
[Info](#)

To be agreed upon

- **Email addresses of participants, observers and the evaluator online**
- **The scope of public accessibility has to be decided**
- **CV's and photos update**
- **Additions or changes in the links**

**Additional suggestions
are welcome!**
